

RAVI KUMAR GUTTULA

Denton, TX 76201 | ravigrk718@gmail.com | [linkedin.com/in/ravi-guttula](https://www.linkedin.com/in/ravi-guttula)

Career Summary

- Data Analyst with 4+ years of IT experience and an M.S. in Information Science from the University of North Texas, specializing in turning complex datasets into clear, actionable business insights.
- Proficient in SQL, Python, Tableau, Power BI, and Advanced Excel with hands-on experience writing advanced queries for data extraction, ETL pipelines, transformation, and stakeholder reporting across large operational datasets.
- Skilled in building interactive KPI dashboards and data visualizations that communicate trends and anomalies to both technical teams and non-technical business stakeholders.

Technical Skills

Data Analysis: SQL, Tableau, Microsoft Excel (Advanced), Data Modeling, Power BI, ETL/ELT, KPI Dashboards

Programming: Python, Shell Scripting, C, Java, C#, Spring Boot, Spring Cloud, RESTful APIs, Angular

Databases: MySQL (query optimization, log analysis, reporting), SharePoint, data warehousing concepts

Cloud & DevOps: Google Cloud (GCP, Dataproc, Cloud Storage), Azure, CI/CD with Jenkins, Docker, Kubernetes, AWS

Version Control: Git, GitHub, Bitbucket, Azure DevOps

Web Technologies: HTML5, CSS3, JavaScript, Bootstrap, JSON

Certifications: Microsoft Azure Administrator, Google Associate Cloud Engineer

Employment Experience

Tata Consultancy Services

Hyderabad, India

Systems Engineer / Data Analyst

Jan 2022 – Aug 2024

- Contributed 80% of team deliverables for an 8-member engineering group; deployed internal software packages using Linux and Jenkins, improving CI/CD reliability and reducing deployment delays by 30%.
- Developed Python automation scripts for log rotation, server health checks, and environment provisioning — reducing manual effort by ~40% and minimizing human error across release cycles.
- Wrote and optimized MySQL SQL queries for log analysis, data extraction, and ETL workflows, enabling faster root-cause analysis and identifying recurring defect patterns across 10+ release cycles.
- Built Python-based monitoring utilities to parse application log files, aggregate error metrics, and generate daily summary reports — delivering actionable insights on system performance to engineering leads.
- Created and maintained SQL-driven KPI dashboards and ad-hoc reports tracking deployment frequency, failure rates, and SLA compliance across 3 cross-functional teams.
- Automated SharePoint documentation workflows using Python scripts, reducing documentation sync lag and ensuring version-controlled records for 5+ teams.
- Developed shell scripts integrated with Jenkins pipelines to automate pre/post-deployment validation checks, reducing rollback incidents and improving deployment success rates.

Total Automation Solutions

Pune, India

SCADA Engineer / Data Analyst

May 2021 – Jan 2022

- Delivered 80% of implementation within a 5-member team for an IoT-based gas monitoring system covering pressure, temperature, and flow parameters across 8 monitoring sites.
- Collected and stored real-time sensor data into a structured SQL database, enabling historical trend analysis and generating operational reports for maintenance scheduling and compliance.
- Wrote SQL queries to extract and aggregate time-series sensor data, identifying anomalies and threshold breaches — enabling proactive maintenance and reducing unplanned downtime.
- Built 3 Power BI dashboards connected to the SCADA SQL database to visualize real-time and historical gas flow KPIs, giving operations managers a centralized health view across all sites.
- Designed Power BI reports tracking device uptime, alert frequency, and sensor drift trends, enabling the team to prioritize field maintenance and improve automation reliability.

Bharat Heavy Electricals Limited (BHEL)

Intern

Hyderabad, India
Apr 2019 – Jun 2019

- Completed hands-on internship integrating Programmable Logic Controllers (PLCs) with CNC machines; gained exposure to PLC programming, machine interfacing, and industrial automation workflows.

Projects

Urban Air Quality Analysis — GCP & Big Data

- Processed 500K+ EPA Daily AQI records for 2024 across 15 U.S. metropolitan regions using Google Cloud Platform (Dataproc, Cloud Storage, Apache Hadoop/HDFS).
- Wrote and executed SQL queries to clean, transform, and organize raw AQI data; identified metro areas with consistently high AQI scores and seasonal pollution spikes.
- Visualized findings using line plots, bar charts, and comparative diagrams — communicating environmental risk insights to both technical and non-technical audiences.

Educational Diversity Analysis — Tableau

- Analyzed educational and demographic datasets to identify racial representation gaps and state-level diversity trends across 50+ U.S. states using Tableau.
- Built interactive dashboards and written summaries presenting findings clearly for non-technical stakeholders.

Automatic Track Switching System — IoT

- Developed an IoT-based railway track switching system using sensors and microcontrollers to sense train position and trigger automatic switching, reducing human error risk.
- Implemented real-time data monitoring and control logic; gained hands-on experience in embedded systems and automation.

Website Development — Capstone Project

- Designed and deployed a dynamic full-stack website using PHP, HTML, and CSS on Replit, featuring user registration, secure login (password hashing), and a contact form.

Volunteer Project Management — Run for the Reeds 2025, Baytown

- Coordinated tasks, schedules, and team communications for a community event; ensured all team members understood their roles and responsibilities.

Education

University of North Texas

Master of Science – Information Science

Denton, TX
May 2026

Gandhi Institute of Technology and Management (GITAM University)

Bachelor of Technology – Electronics and Communication Engineering

Visakhapatnam, India
May 2020
